A BRAND-NEW LIGHT

An innovative start-up born out of Euroflex's long expertise in awning components and accessories, **Sidera is redefining the outdoor design world** with its bold vision and pioneering products. Sidera skillfully brings together functionality

and design, aiming to become a benchmark reference in the new market of high-end awning components. Sidera's products are **unique and exclusive**, designed to reinvent the style and design of outdoor your areas.

Sidera caters to different needs by supplying both **components to assemble**, if you're looking for customized and flexible solutions; and **finished awnings ready for installation**, if you require an immediate, ready-to-install solution.

innovation and design
THE BEATING HEART OF SIDERA

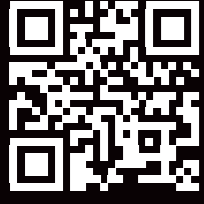

The patented ILE (Infinity LED Experience) system was created from the research of Sidera's R&D team, which sought to harness light to revolutionize outdoor design. During the day, ILE integrates seamlessly with the outdoor contexts,

in harmony with the surrounding landscape. As evening falls, ILE comes to life, creating a striking focus for the outdoor areas with its integrated LED lighting system. This lighting system creates weightless, material-less effects: an ethereal, infinite space.

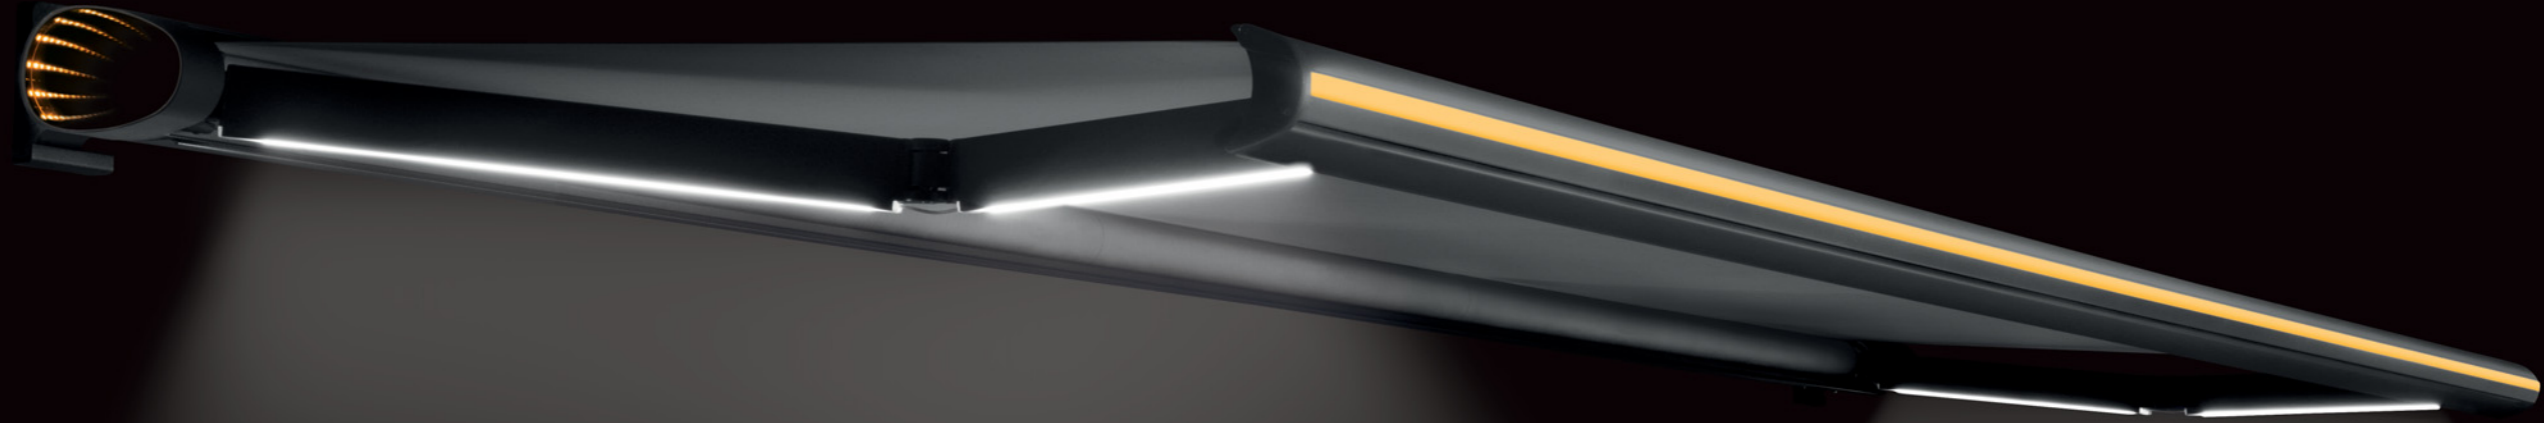

ILE is a **perfect blend of technology and design**, with its striking visual effects by day and by night. Your awning is a distinctive, functional transforming feature, perfect for all outdoors with modern lines.

GIAUSAR

GIAUSAR, with its minimal design, is an essential feature perfectly suited to all settings.

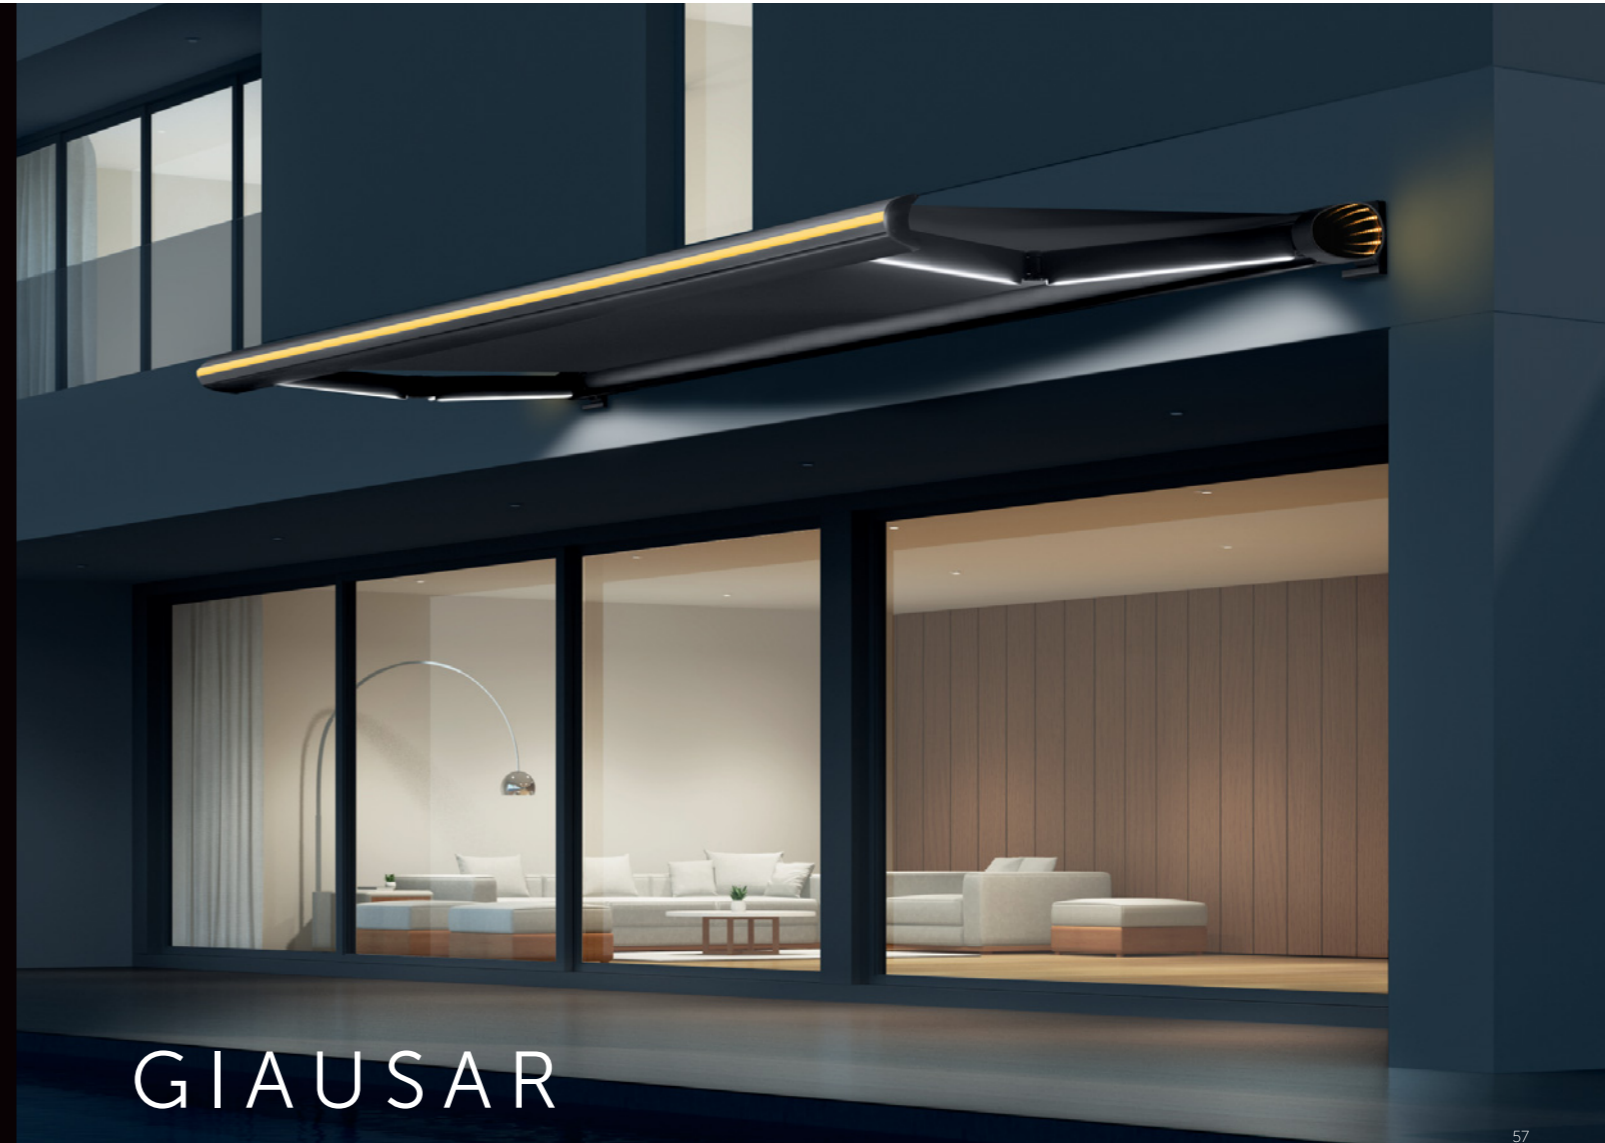

Outstanding visual effects are created with ILE's integrated LED side lighting system which is coordinated with the integrated lighting on the front. The slim, minimalist design takes awnings

to a new level: from an accessory to be the focus of your outdoor setting, inviting you and your guests to enjoy the outdoors as a timeless space, also with the arms with their dimmable white LED light. ILE modules give you full control over the light in a vast range of tones. The ability to also customize

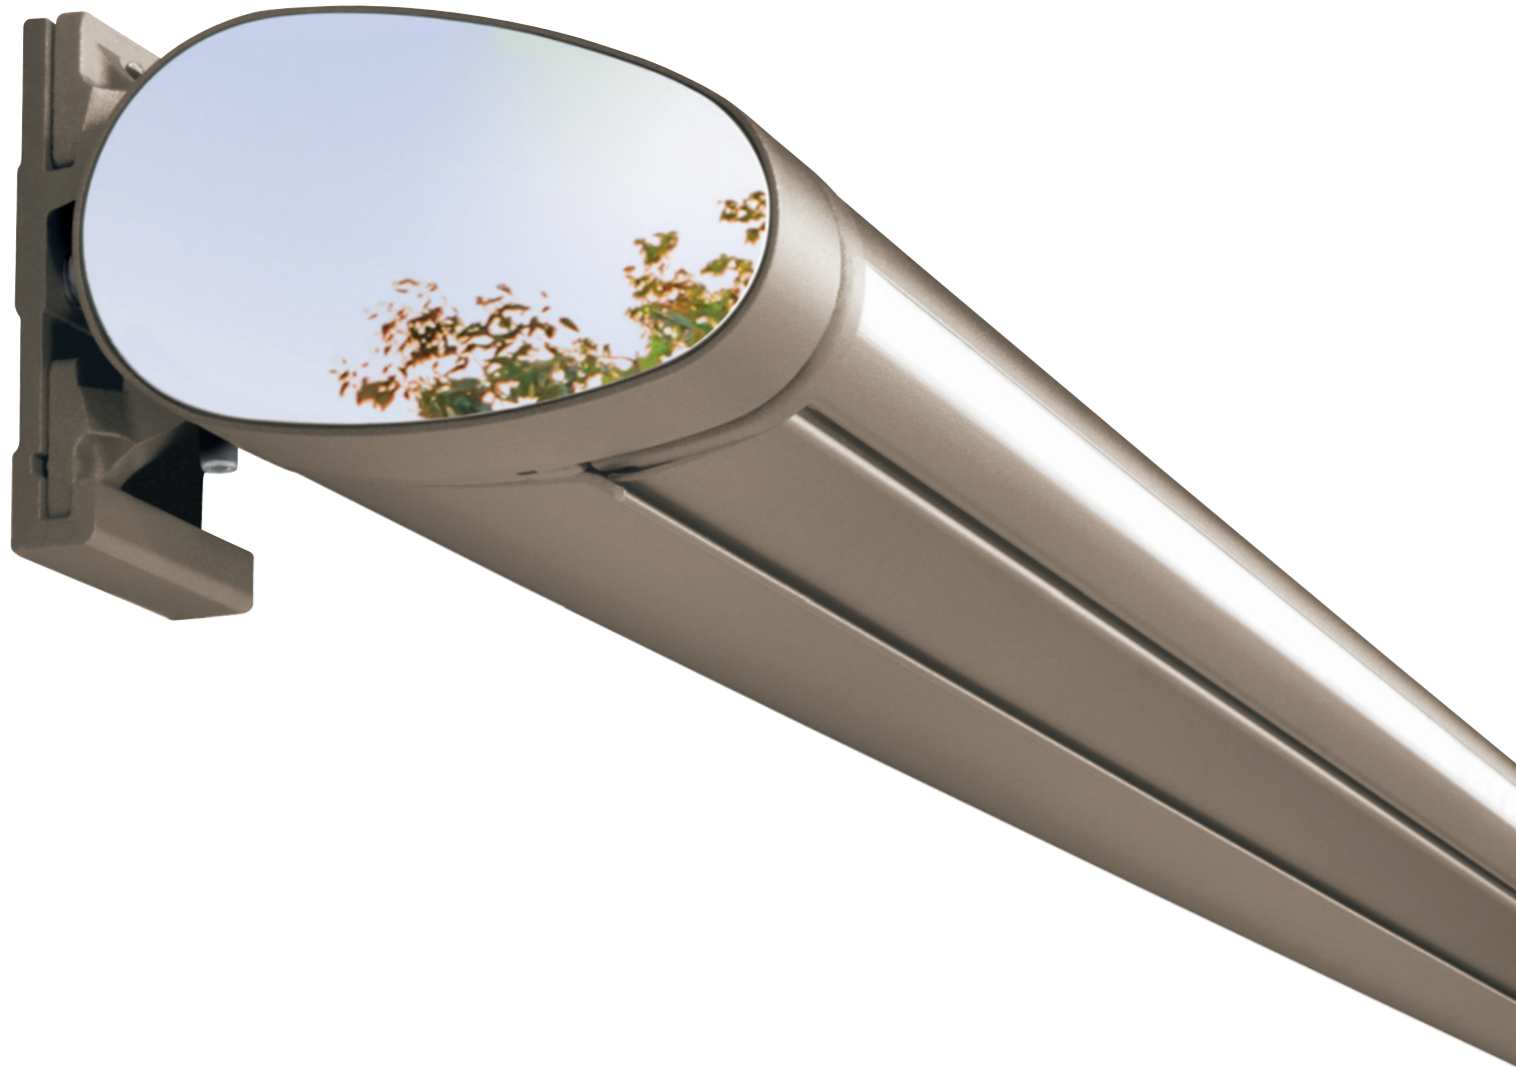

light intensity and color via the remote control or app makes GIAUSAR an outdoor color therapy tool, **perfect for harmonizing your outdoor zone with your emotional well-being**. You can give a gentle light intensity for a soothing atmosphere, or increase the light intensity for a special occasion.

Maximum dimensions:

width 600 cm

projection 300 cm

COLOR DESIGN

SIDERA takes you into the alluring world of color design.

Be inspired by a color palette that will transform your space into a true statement of style and personality.

Discover the perfect combination; bring to life a boundless outdoor setting where every detail reflects your unique taste.

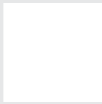

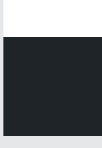

Our approach to color design matching structures and fabrics is developed in conjunction with the R&D departments of the world's leading fabric manufacturers. These collaborations ensure that all tones are both visually attractive and in step with the evolving trends in contemporary style.

SIDERA components are surface treated according to EN12206. We use thermosetting polyester powders that provide high UV/weather resistance, and significant corrosion resistance, making them ideal for application on exterior finishing parts.

Contact our technical team to inquire about more color-customization options.
